Cutter Soil Mixing

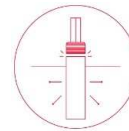

Deep foundations

Our deep foundation solutions ensure maximum longevity for your structures, whatever the nature of the ground.

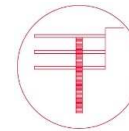

Thanks to our expertise across all deep foundation techniques, Soletanche Bachy can provide the turnkey solution best adapted to your project.

Driven piles

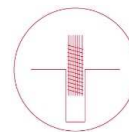

Plunged columns

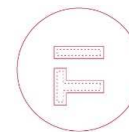

Displacement piles

Micropiles

Bored piles

Barrettes

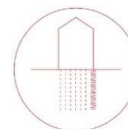

Reinforcing

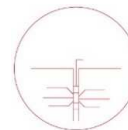

Grand Palais
France

Our reinforcing processes guarantee the durability of your structures, even in the face of hydrology problems or when working in restricted space.

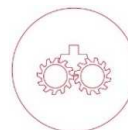

For both new-build and repair, Soletanche Bachy can draw on its wide portfolio of techniques to propose the best solution for your project.

Thin cut-off walls

Ground water lowering

Our waterproofing techniques allow us to manage the presence of ground water to facilitate construction.

Isolating working zones, limiting water infiltration, reducing subsidence: Soletanche Bachy's range of solutions means you can find the most suitable variant for your site.

Subansiri Dam
India

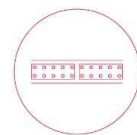

Retaining structures

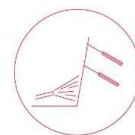

Our retaining structure solutions hold back ground to allow vertical excavations in total safety.

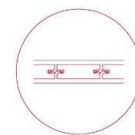

Through our unique portfolio of dedicated solutions, our expertise in geotechnics and civil engineering, and our patented tools, Soletanche Bachy can provide the optimal solution for your construction project.

auger**

**Our ground improvement techniques
make it possible to build on otherwise
difficult terrain, even on poor quality soils
and in earthquake zones.**

Our processes improve the load-bearing capacity of the ground and reduce the effects of subsidence and liquefaction in case of seismic tremor.

They can even offer an alternative to deep foundations. Soletanche Bachy works with you to select the solutions which best correspond to your project's needs.

We can provide a turnkey service encompassing foundations and civil engineering, specially adapted for port structures.

Through its ForSHORE brand, Soletanche Bachy works with you to optimise management and dimension calculation of your port infrastructure project.

Colombia

Tunnels

**Mechanically-bored
tunnels**

**Traditional
tunnels**

We offer a full range of solutions for your tunnels, from design through execution and remediation, including excavation, special works, and lining.

Through its specialist subsidiaries Bessac and Soletanche Bachy Tunnels, the Group provides tailored solutions adapted to the needs and constraints of your tunnel projects, and can even produce its own tunnel boring machines.

Our very large range of plant

- **300** crawler cranes
- **200** diaphragm wall plant
- **150** piling machines
- **100** vibroflots
- **200** small diameter drilling rigs
- **70** drilling machines
- **350** grouting pumps
- **30** high pressure pumps for jet grouting
- **20** tunnel boring machines
